

STRATCO®

new since 1928

STRATCO, Inc. designs equipment to mix asphalt, adhesives, and lubricating grease. We provide basic design, detailed design and turnkey projects for industrial processes. With 90 years of experience and our equipment lasting over 40 years, our Customers depend on our one-stop shop service.

Since 1928 we have developed long-term relationships with grease manufacturers and have designed entire grease plants. From the planning phase to providing spare and replacement parts, STRATCO is there to help our Customers.

STRATCO® Contactor™ reactor:
Heart of the process in the manufacturing of Lubricating Grease

EcoMachine® used in the modified asphalt paving industry. Mixes crumb rubber (from used tires) and virgin asphalt

STRATCO® R&D Pilot Unit used for research of industrial processes. Benefits include less raw materials, less production time and increased yields.

Modified Asphalt Contactor™ reactor used in the Asphalt Shingle Manufacturing process
